RELEVANT DATA AT A GLANCE

No more data chaos
on the file server

aikux.com

MIGRAVEN.24/7 CLEARS THE WAY TO RELEVANT DATA

Huge amounts of old Data lie on the file servers of most organizations. Most of this data was created years ago and has not been used since. Because of this huge amount of data, business valuable information - which represents just a small amount overall - gets harder and harder to find. Indeed, working with this amount of data is no longer effective, and it's already too late to manually clean up the server.

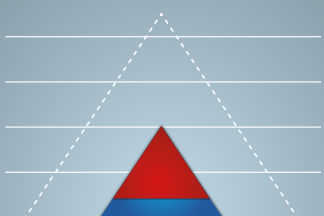

THE DATA MOUNTAIN IS GROWING
The proportion of business valuable information continues to decline

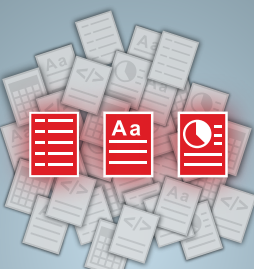

EMERGING DATA CHAOS
Important data is no longer visible
20.000 - 40.000 files per user

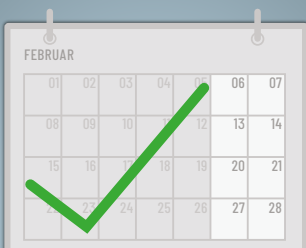

UP TO 20 DAYS OF WORK LOST EACH YEAR
Due to inefficient file storage

THE DATA MOUNTAIN IS REMOVED
Due to the introduction of data retention policies

RELEVANT DATA BECOMES VISIBLE AGAIN
Because files are automatically separated

MORE SPACE IN THE CALENDER
Because users can work more efficiently

DATA RETENTION: ARCHIVING RECONCEPTUALIZED

The process makes the important data more quickly available by separating the obsolete data.

With migRaven.24/7's patent-pending data retention method, the mountain of old files is removed. This creates a clean view for the user but yet also offers easy access to the separated data. The result is up to 70% less data and folders on the productive file system. This ensures a better overview while at the same time makes working with the actual relevant company data more efficient and secure.

Archiving with the User in focus

Suppose an accountant would ask the fitter of his filing cabinet where to put which folders and who should receive a key. This absurd situation is reality on many file servers and IT is responsible for resolving these issues.

migRaven.24/7 establishes a new concept of data management on your file server and places essential data management processes in the hands of your departments. Open up an efficient file system without mountains of data, with your users and with the help of migRaven.24/7. Without outdated data and without chaotic directory structure.

Data Retention: how it works

Via a web interface, users can remove individual files or directories spontaneously with just a few clicks from the production system, as well as rule-based automated cleaning with the help of policy directories. A high degree of flexibility covers the requirements of various departments according to their own data retention guidelines, as well as the IT departments interest in optimized storage costs

The benefits of "The Exit-option for data"

A PLUS FOR DATA GOVERNANCE

Fewer directories with a flatter structure means more overview and thus more security.

HIGH USER ACCEPTANCE

Users appreciate being able to manage their own data. At the same time, the IT department is massively relieved.

COSTS DOWN, EFFICIENCY UP

The users save a lot of time with file storage, make fewer mistakes, ensuring significantly reduced costs.

FILESHARING WITH FOLDER SELF SERVICE

When employees from different departments work together on a project, the question of a suitable file storage often arises. For this situation, many companies have exchange directories that all employees can access. However, much of this data is either sensitive, personal or secret and, therefore, should not be there.

Folder Self Service is user-centered Data management

Using templates in migRaven.24/7's web interface employees can create and define new directories independently,

- » how the directory is named,
- » where on the file server it will be placed,
- » which persons receive read and/or write permissions,
- » whether and when the directory should be automatically deleted.

After the set up is complete, all parties receive an info Email and can use the directory immediately. Through the consistent implementation of Access Based Enumeration, the directory is only visible to it's assigned users, and therefore does not disturb other users on the file system. The Data Owner can use the migRaven.24/7 web interface at any time to easily change permissions as required.

Thus, Folder Self Service is a valuable aid in the control of project files, taking into account a clean authorization allocation.

What Folder Self Service offers

TOTAL DATA SECURITY

Through Folder Self Service all stored data is protected from unauthorized access.

FAST DATA ACCESS

Exchange directories can be created without the help of the IT department and are immediately available to the project members.

FLEXIBLE TEAMWORK

Access rights for created data and directories can be added or removed as needed.

TRANSPARENCY THROUGH ANALYSIS TOOLS

When the Administrator or Data Owner tries to gain insight on, or an overview of the data, the standard operating system tools can't offer much help. In order to understand the data structure or to restructure it, transparency is absolutely necessary. The analysis tools provided by migRaven.24/7 show you where old data is stored, who is responsible for which data and also how complex the overall data structure is.

Obsolete Data Report

This report quickly shows the administrator where large amounts of data are stored in your directories and how old this data is. Any areas of the file system containing Data Mountains can easily be localised and targeted measures can be taken.

Timeframe	Number of files	File size
Less than 30 days	261.54	125.26 GB
1-6 Months	121.503	412.16 GB
6-12 Months	173.098	358.96 GB
1-2 years	384.480	855.08 GB
2-4 years	634.717	1.20 TB
4-6 years	631.496	1.016.37 GB
6-8 years	488.020	773.91 GB
8 or more years	1.333.017.9	1.37 TB

Detailed information about your data

For each directory, migRaven shows you clearly which users have which rights, the age distribution of the data, which file types are present and who owns which files.

Reliable identification of the Data Owner

The Data Owner can be reliably identified per directory using the file owner tab. Here, the number of files owned by a user is displayed. The user with the most created files should be the Data Owner or at least knows who is.

Username	Number of Files	Filesize
Derek Oswald@ad.WeFile.com	347	1.55 GB
janet angular@ad.WeFile.com	85	1.08 GB
bart grodzickiy@ad.WeFile.com	23	161.85 MB
bernard biermann@ad.WeFile.com	22	1.30 GB
mirk denzer@ad.WeFile.com	19	195.23 MB
tryhard double@ad.WeFile.com	12	21.25 MB
francis darling @ad.WeFile.com	11	10.76 MB
sony burper@ad.WeFile.com	10	17.24 MB
maximilian buch@ad.WeFile.com	9	543.00 B

INTRODUCE MIGRAVEN.24/7 AND ...

In just a couple of hours migRaven.24/7 is set up and available to your employees 24/7.

IT-Department

- » Installation of migRaven.24/7
- » Scanning of Active Directory and file server
- » Analysis of the data structure
- » Basic configuration of Data Retention and Folder Self Service
- » Determination of the Data Owners

Business Departments

- » Log into the migRaven.24/7 Web Interface
- » Analysis of your own data storage
- » Localize old data and directories
- » Separation of obsolete data to the passive data folder
- » Creation of exchange folders complete with authorization management

... ENJOY THE ADVANTAGES OF A NEW DATA CULTURE

FOR THE ORGANIZATION

- » An additional 6 work days per employee /year due to less time wasted searching for data
- » Better data protection with file sharing using Folder Self Service
- » Greater employee satisfaction and efficiency thanks to a cleaner file system

FOR THE DEPARTMENT

- » Automatic separation of old data
- » Quicker access to relevant data thanks to an improved overview
- » Self-organized and secure data exchange

FOR THE IT DEPARTMENT

- » Elimination of routine tasks such as creating exchange folders
- » Insight into the data structure
- » Improved Data Governance
- » Optimized storage costs
